Probability is the branch of mathematics that studies the possible outcomes of given events together with the outcomes' relative likelihoods and distributions. In common usage, the word "probability" is used to mean the chance that a particular event (or set of events) will occur expressed on a linear scale from 0 (impossibility) to 1 (certainty), also expressed as a percentage between 0 and 100%.

In probability theory and statistics, a copula is a multivariate probability distribution for which the marginal probability distribution of each variable is uniform. Copulas are used to describe the dependence between random variables. Their name comes from the Latin for "link" or "tie", similar but unrelated to grammatical copulas in linguistics [citation needed].

Mathematical statistics is the application of mathematics to statistics. Mathematical techniques used for this include mathematical analysis, linear algebra, stochastic analysis, differential equations, and measure-theoretic probability theory.. Overview. In applying statistics to a problem, it is common practice to start with a population or process to be studied.

Published as a conference paper at ICLR 2015 The decoder is often trained to predict the next word y_{t+1} given the context vector c_t and all the previously predicted words $y_{1:t}$; $y_{t+1} \sim p(y_{t+1} | c_t, y_{1:t})$. In other words, the decoder defines a probability over

Algorithm 1 Minibatch stochastic gradient descent training of generative adversarial nets. The number of steps to apply to the discriminator, k , is a hyperparameter. We used $k=1$, the least expensive option, in our experiments.
