important in dealing with the behavior of gases. In fact, it was in the study of gases that Lord Kelvin first proposed the absolute scale in 1848.

Hi thanks for this info helps a lot but I have a question. It concerns organic compounds. Say you have a ketone such as heptanone. So the boiling point of this compound should be relatively high because it has a large surface area and it is a polar molecule so there are dipole -dipole forces present.

Tyndallization is a process dating from the nineteenth century for sterilizing substances, usually food, named after its inventor, scientist John Tyndall, that can be used to kill heat-resistant endospores. Although considered old-fashioned, it is still occasionally used. A simple and effective sterilizing method commonly used today is autoclaving: heating the substance being sterilized to 121 ...

The molecular mass (m) is the mass of a given molecule: it is measured in atomic mass units (amu) or daltons (Da). Different molecules of the same compound may have different molecular masses because they contain different isotopes of an element. The molar mass is a measure of the average molecular mass of all the molecules in a sample, and is usually the more appropriate measure when dealing ...
