In computer science, approximate string matching (often colloquially referred to as fuzzy string searching) is the technique of finding strings that match a pattern approximately (rather than exactly). The problem of approximate string matching is typically divided into two sub-problems: finding approximate substring matches inside a given string and finding dictionary strings that match the ...

A probabilistic neural network (PNN) is a four-layer feedforward neural network. The layers are Input, hidden, pattern/summation and output. In the PNN algorithm, the parent probability distribution function (PDF) of each class is approximated by a Parzen window and a non-parametric function. Then, using PDF of each class, the class probability of a new input is estimated and Bayes's™ rule is ...

1. Life, Work, and Influence. Born in 1770 in Stuttgart, Hegel spent the years 1788–1793 as a student in nearby Tübingen, studying first philosophy, and then theology, and forming friendships with fellow students, the future great romantic poet Friedrich Hölderlin (1770–1843) and Friedrich von Schelling (1775–1854), who, like Hegel, would become one of the major figures of the German ...

The measure K is the Kullback–Leibler divergence, between two densities which can also be used as a measure of MI. From the above equations, we need to know the probability density function (PDF) of the variables to calculate MI. Since the data we obtain is of finite samples, the PDF cannot be calculated accurately.
