Martindale's Calculators On-Line Center: Materials

Ceramics are now commonly used in the medical fields as dental and bone implants. Surgical cermets are used regularly. Joint replacements are commonly coated with bioceramic materials to reduce wear and inflammatory response.

Engineering is the application of knowledge in the form of science, mathematics, and empirical evidence, to the innovation, design, construction, operation and maintenance of structures, machines, materials, devices, systems, processes, and organizations. The discipline of engineering encompasses a broad range of more specialized fields of engineering, each with a more specific emphasis on ...

Tape casting is a standard shaping technique used to produce flat ceramic sheets with a thickness range varying between 10 μ m to 1 mm .The process was originally developed by Glenn Howatt during 1940s to manufacture capacitor dielectrics, which remains one of the most important applications of tape casting .The general fabrication process of ceramic thin materials by tape casting can be ...

Sol-gel chemistry offers a flexible approach to obtaining a diverse range of materials. It allows differing chemistries to be achieved as well as offering the ability to produce a wide range of nano-/micro-structures.

Sol-gel based materials for biomedical applications

ABSTRACT. Nanocomposites, a high performance material exhibit unusual property combinations and unique design possibilities. With an estimated annual growth rate of about 25% and fastest demand to be in engineering plastics and elastomers, their potential is so striking that they are useful in several areas ranging from packaging to biomedical applications.
