

engineering economics and costing pdf

Target costing is an approach to determine a product's life-cycle cost which should be sufficient to develop specified functionality and quality, while ensuring its desired profit. It involves setting a target cost by subtracting a desired profit margin from a competitive market price. A target cost is the maximum amount of cost that can be incurred on a product, however, the firm can still ...

Summary: As chip production volumes increases, the per unit cost inevitably goes down. In any one of these
categories, the difference in per unit cost between building 10,000 units and 10M units can be anywhere from
2X to 10X.
