1. INTRODUCTION 1 go ahead and multiply the number 8,388,628 x 2 in your head. Can you do it in a few seconds? There is a young man who can double that number 24 times in the space of a few seconds. He gets

## **Brain Rules - Introduction - by John Medina**

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Scientific American is the essential guide to the most awe-inspiring advances in science and technology, explaining how they change our understanding of the world and shape our lives.

## **Welcome SA Digital Customers - Scientific American**

We now know that the oft-repeated "your brain only runs on glucose" is wrong. I've mentioned it before, and anyone who's taken the time to get fat-adapted on a low-carb Primal eating plan intuitively knows that your brain doesn't need piles of glucose to work, because, well, they're using their brain to read this sentence. Obviously, you eventually adapt and find you have ...

## **Dear Mark: How Much Glucose Does Your Brain Really Need?**

Dr. Jaminet, I also agree with your point that food cravings are driven by nutritional deficiencies, but how does that explain some of the research findings that show reduced food cravings after exercise?

Ardipithecus ramidus had a small brain, measuring between 300 and 350 cm<sup>3</sup>. This is slightly smaller than a modern bonobo or female common chimpanzee brain, but much smaller than the brain of australopithecines

like Lucy (~400 to 550 cm<sup>3</sup>) and roughly 20% the size of the modern Homo sapiens brain. Like common chimpanzees, A. ramidus was much more prognathic than modern humans.

In invertebrates, at least, taste has a social function. For example, Drosophila males use taste to differentiate between females and males, as well as to recognize mating status and activities of individual females 102, 103. Whether taste plays a social communication role for vertebrates remains to be determined.
