My view on the operation of the rattleback. No unknown forces are needed to engineer the reversal of spin. All we need are the initial input that sets the rattleback in motion, inertia which tries to keep it in motion and friction which slows down the rotation and ends up giving way to a rocking phase.

Rattleback mystery explained - Sepp Hasslberger

A mechanical wave is a wave that is an oscillation of matter, and therefore transfers energy through a medium. While waves can move over long distances, the movement of the medium of transmission "the material" is limited. Therefore, the oscillating material does not move far from its initial equilibrium position.

An inertial frame of reference in classical physics and special relativity is a frame of reference in which a body with zero net force acting upon it is not accelerating; that is, such a body is at rest or it is moving at a constant speed in a straight line. In analytical terms, it is a frame of reference that describes time and space homogeneously, isotropically, and in a time-independent manner.
