Marine operations and marine analyses Page 9 10/16/2014 Typical output from this first phase is a "master document and drawing register", "MDDR", defining milestone deliverables for different phases of the project. Further, the total manning of the project is established and a proper familiarization is conducted.

Today mathematical analysis and other systematic planning of the marine operations have reduced the price substantially, - regardless if you count the price in human lives or in dollars. The purpose of this document is to give the reader an idea of how this is possible.

Marine Operations. A brief summary of operations and

have a history almost as old as mathematics itself. Thales, Hipparchus, Napier, Wright, and others contributed the formulas that permit computation of course and distance by plane, traverse, parallel, middle latitude, Mercator, and great circle sailings. 104. The Earth The Earth is an irregular oblate spheroid (a sphere flattened at the poles).

This chapter discusses some technical and mathematical aspects of modeling of marine systems. Mathematical modeling involves the application of generally valid mathematical and computer techniques to specific subject matter with its own specific problems.

Aspects of Mathematical Modelling. The construction of mathematical models is an essential scientific activity. Mathematics has long been associated with developments in the exact sciences and engineering, but more recently mathematical modelling has been used to investigate complex systems that arise in many other fields.
