In a microwave beam directed at an angle into the sky, a small amount of the power will be randomly scattered as the beam passes through the troposphere. A sensitive receiver beyond the horizon with a high gain antenna focused on that area of the troposphere can pick up the signal.

### **Microwave - Wikipedia**

The cosmic microwave background radiation is an emission of uniform, black body thermal energy coming from all parts of the sky. The radiation is isotropic to roughly one part in 100,000: the root mean square variations are only 18  $\mu$ K, after subtracting out a dipole anisotropy from the Doppler shift of the background radiation. The latter is caused by the peculiar velocity of the Earth ...

As the mother of three children " with thinner skulls, higher water content in their skulls (= higher conductivity) and undeveloped immune systems " it is very important to find out what levels of microwave RF radiation my kids are being exposed to, so that I can take measures to protect them where needed.
