

the timber frame home pdf

Timber framing and "post-and-beam" construction are traditional methods of building with heavy timbers, creating structures using squared-off and carefully fitted and joined timbers with joints secured by large wooden pegs. It is commonplace in wooden buildings from the 19th century and earlier. If the structural frame of load-bearing timber is left exposed on the exterior of the building it ...

Timber framing - Wikipedia

The advantages of timber frame in construction include strength and durability, speed of construction, low carbon footprint and life span.

Cladding is a non-loadbearing skin or layer attached to the outside of a home to shed water and protect the building from the effects of weather. It is a key element in the aesthetic appeal of the home and directly influences both building cost and property value. Your choice of cladding has a significant effect on the environmental performance of your home.
